

Business Requirements Document (BRD)

1. Executive Summary

This document outlines the business requirements for a mobile-first farm management and marketplace platform designed to assist farmers in managing workforce payments, tracking financial performance, accessing market price data, and enabling peer-to-peer trading.

The product aims to improve operational efficiency, financial visibility, and market access for small and mid-scale farmers.

2. Objectives

- Digitize daily farm operations
 - Provide visibility into expenses, income, and profitability
 - Enable better decision-making using data insights
 - Improve access to real-time agricultural market prices
 - Facilitate direct farmer-to-farmer transactions
-

3. Scope

In Scope

- Worker attendance and wage tracking
- Expense and income management
- Analytics dashboard (basic and advanced)
- Market price tracking
- Marketplace/social platform for farmers

Out of Scope (Initial Phases)

- Advanced AI-based prediction models
 - Integration with banking/payment systems
 - Government subsidy management
-

4. Stakeholders

- Farmers (Primary users)
- Farm owners/managers
- Agricultural traders (secondary users)
- Product team (developers, designers)

5. User Personas

5.1 Small-Scale Farmer

- Limited technical literacy
- Needs simple UI
- Focus: tracking expenses and wages

5.2 Mid-Scale Farmer

- Moderate smartphone usage
- Needs analytics and insights

5.3 Trader/Buyer

- Interested in purchasing crops/livestock
-

6. Functional Requirements

6.1 Worker Management Module

- Add/edit/delete worker profiles
- Record daily attendance
- Track wages (paid, pending, advance)
- Generate worker payment summaries

6.2 Financial Management Module

- Record expenses (labor, seeds, fertilizer, equipment)
- Record income (crop sales, livestock sales)
- Categorize transactions
- View total expenses and income

6.3 Analytics Dashboard

- Display expense vs income charts
- Show profit/loss summaries
- Worker cost analysis
- Crop-wise financial insights (future phase)

6.4 Market Price Tracking

- Display daily crop prices
- Region-based filtering
- Historical price trends (graphs)

6.5 Price Insights (Phase 2/3)

- Trend analysis
- Price alerts
- Basic forecasting indicators

6.6 Marketplace / Social Platform

- Create posts (sell livestock, crops, equipment)
 - Browse listings
 - Contact seller (phone/chat)
 - Location-based filtering
-

7. Non-Functional Requirements

7.1 Usability

- Simple, intuitive interface
- Multi-language support
- Voice-assisted input (future enhancement)

7.2 Performance

- Fast load times (<3 seconds)
- Optimized for low-end devices

7.3 Availability

- Offline mode with data sync

7.4 Security

- Secure user authentication
- Data privacy compliance

7.5 Scalability

- Support increasing number of users and data volume
-

8. Assumptions

- Users have access to smartphones
 - Internet connectivity may be intermittent
 - Users are willing to input basic data regularly
-

9. Constraints

- Limited digital literacy among users
 - Dependence on external data sources for market prices
 - Budget and development timeline constraints
-

10. Success Metrics

- Number of active users
 - Daily/weekly data entry rate
 - User retention rate
 - Number of marketplace transactions
-

11. Phased Roadmap

Phase 1 (MVP)

- Worker management
- Expense tracking
- Basic dashboard

Phase 2

- Market price tracking
- Notifications and alerts

Phase 3

- Marketplace features

Phase 4

- Advanced analytics and prediction
-

12. Risks

- Low adoption due to complexity
 - Inaccurate or delayed market data
 - Marketplace liquidity challenges
-

13. Future Enhancements

- AI-based price prediction
 - Integration with IoT farm devices
 - Government scheme integration
 - Financial services (loans, insurance)
-

14. Conclusion

This product has the potential to digitize farm operations and empower farmers with actionable insights and improved market connectivity. A phased implementation approach is recommended to ensure usability, adoption, and scalability.
